

A LinkedIn thread titled Work Harder, says the VC influencer hit 1,380 upvotes and 313 comments last month.

**A VC can post daily and deploy quarterly.
The feed rewards frequency. Capital
rewards conviction, slow and mostly
invisible.**

Judge velocity by time from first meeting to term sheet, not time from post to reaction.

Look at follow-on rate into their own portfolio, not new-logo announcement rate.

**What a fund backs in a down
quarter matters more than what it
posts in one.**

The influencer persona is optimized to be read. The fund is optimized to be underwritten.
